

Dr Adli Ali

Dr Adli Ali is a Senior Clinical Lecturer and Consultant Paediatric Immunologist in UKM Medical Center, Malaysia. His clinical work focusses on care for patients with primary and secondary immune disorders, autoimmune and allergy diseases. His research addresses various translational immunological issues, from fundamental understanding of novel gene defects to identification and implementation of novel pathway targeted treatment strategies in clinical practice.

Besides being actively involved with academic teaching and clinical works in patient care and research, he is a prominent driving force in patient advocacy, both in the region and internationally. Dr Adli was fundamental in the inception of Malaysia Patient Organisation for Primary Immunodeficiencies (MyPOPI). He is also one of the founders of South East Asia Primary Immunodeficiencies network or SEAPID, a regional network of professionals involved in the care and research of primary immunodeficiencies.
